

REMARKS

In response to the official office action of February 23, 2005, applicant had previously canceled claims 1-4 in view of the prior art, and applicant had also previously rewritten claim 5 as a new base claim including the limitations of the original base claim and any intervening claims. Again, applicant disagrees with the rejection of claims 5-8 under 35 U.S.C. 103 in view of the stated prior art, because Robb doesn't describe nor suggest the structural limitations of the lever being hingedly attached to the back wall of the handheld housing; instead, the lever in Robb is attached to the base unit and not to the handheld housing as shown in FIGS. 2C & 2D. The handheld housing in Robb does not have a lever attached to the handheld housing 11 unlike that shown and described in the present invention. Further, Yang doesn't describe nor suggest having caller ID unlike the present invention which displays the phone number of the party calling; instead, Yang describes having text messaging which is not Caller ID and which does not identify the person making the incoming telephone call. In addition, Yang doesn't describe nor suggest phone connect and disconnect switches unlike the present invention. In Yang, the alarm does the switching. There are no manual switches for the user to engage in Yang unlike the present invention. The incoming messages in Yang are not vocally received as incoming telephone calls unlike the present invention where the user can vocally communicate back and forth. In the present invention, a user can manually switch from receiving TV transmitted signals to receiving telephone transmitted voice responsive messages unlike that described and claimed in Yang.

Applicant has not added any new subject matter to the claims and respectfully request that the examiner takes the foregoing into consideration and that she be granted Letters Patent for her invention.

Respectfully Submitted,
For: Ivy Whitsey-Anderson
